Time – 45 minutes SCHOOL: _____

80 Questions

For each question, decide which is the best answer choice, and encircle the corresponding letter.

1. I don't know when _____.
   (1) will she arrive (2) she arrive (3) she will arrive (4) does she arrive

2. When he _____, I'll let you know.
   (1) arrives (2) will arrive (3) arrived (4) would arrive

3. Every possible means _____, but none proves successful.
   (1) has tried (2) have tried (3) have been tried (4) has been tried

4. The election _____ next month.
   (1) is to be held (2) is to hold (3) is to be hold (4) is hold

5. Jane _____ John for three years.
   (1) has been married (3) has married with
   (2) has been married to (4) has got married with

6. You can find that the house _____ for years.
   (1) hasn't been painted (3) hasn't painted
   (2) didn't be painted (4) didn't paint

7. After everyone _____, the concert began.
   (1) sitted (2) seat (3) seated (4) was seated

8. The children _____ good care of.
   (1) have taken (2) has taken (3) have been taken (4) has been taken

9. We have to go to the seaside in his car because ours _____ fixed.
   (1) wasn't (2) haven't (3) hasn't been (4) hadn't been

10. He said he felt bad because he _____ late the night before.
    (1) sits up (3) has sit up
    (2) was sitting up (4) had been sitting up

Reading Comprehension

Directions: Answer the questions below based on the information in the accompanying passages and compositions and then darken the corresponding oval on the answer sheet.

PASSAGE 1:

If Johnny can't write, one of the reasons may be a conditioning based on speed rather than respect for the creative process. Speed is neither a valid test of nor a proper preparation for competence in writing. It makes for murkiness, glibness, disorganization. It takes the beauty out of the language. It rules out respect for the reflective thought that should precede expression. It runs counter to the word-by-word and line-by-line reworking that enables a piece to be finely knit.

This is not to minimize the value of genuine facility. With years of practice, a man may be able to put down words swiftly and expertly. But it is the same kind of swiftness that enables a cellist, after having invested years of efforts, to negotiate an intricate passage from Haydn. Speed writing is for stenographers and court reporters, not for anyone who wants to use language with precision and distinction.

Thomas Mann was not ashamed to admit that he would often take a full day to write 500 words, and another day to edit them, out of respect for the most difficult art in the world. Flaubert would ponder a paragraph for hours. Did it say what he wanted it to say—not approximately but exactly? Did the words turn into one another with proper rhythm and grace? Where they artistically and securely fitted together? Were they briskly alive, or were they full of fuzz and ragged edges? Were they likely to make things happen inside the mind of the reader, igniting the imagination and touching off all sorts of new anticipations? These questions are relevant not only for the established novelist but for anyone who attaches value to words as a medium of expression and communication.

E. B. White, whose respect for the environment of good writing is exceeded by no word-artist of our time, would rather have his five fingers cut off than to be guilty of handling words lightly. No sculptor chipping away at a granite block in order to produce a delicate curve or freature has labored more painstakingly than White in fashioning a short paragraph. Obviously, we can't expect our schools to make every Johnny into a White or a Flaubert or a Mann, but it is not unreasonable to expect more of them to provide the conditions that promote clear, careful, competent expression. Certainly the cumulative effort of the school experience should not have to be undone in later years.

—by Norman Cousins, Editor of *Saturday Review*

Kommentar [A63]:

Kommentar [A64]:
4 passages
20 questions
Easy lang daw

Kommentar [A65]: From UPCAT 2013 set A
item number 226 – 230

61. According to the passage, competence in writing is
(1) an art that takes practice.
(2) a skill that requires dexterity.
(3) a result of the spontaneous flow of words.
(4) an innate ability that a few people have.

Kommentar [A66]:

62. The main purpose of the passage is to
(1) present an original idea.
(2) describe a new process.
(3) argue against an established practice.
(4) comment on a skill and its techniques.

Kommentar [A67]:

63. Our schools, according to the passage,
(1) are providing proper conditions for good writing.
(2) should not stress writing speed on a test.
(3) should give essay tests rather than multiple-choice tests.
(4) teach good writing primarily through reading.

Kommentar [A68]:

64. In describing White as a "word-artist," the author means that White
(1) was a great writer.
(2) illustrated his stories.
(3) was colorful in his descriptions.
(4) had artistic background.

Kommentar [A69]:

65. It can be inferred from the passage that the author values good literature primarily for its ability to
(1) relieve the boredom of everyday life.
(2) accurately describe events as they occur.
(3) prevent disorder in society.
(4) communicate ideas and experiences.

Kommentar [A70]:

PASSAGE 2:

French portrait painting in the years immediately following the French Revolution developed a character all its own. The bitter experience of the Revolution created a people who had lost their ability to idealize, and could only recognize a reality they could see. Naturalism became a jealous god that purged completely the elements of Romanticism—be they classical, Walterian, Bolati, or whatever—with which it had found a certain compatibility in the first half of the century. We can see naturalism as an end in itself in the late portraits of Francis Peters, where the earlier Walterial ideal was swept aside. It can also be seen in the work of James Ellis Green, whose portrait of General Lefete is no match for his marvelous equestrian "Welton." And it can be recognized in countless other painters of the period. It has gained for the sixties and seventies the reputation of an art that is crass and banal in its naturalism, devoid of any poetry. With some justification, the question has been asked whether a painter that was so captivated by objectivism and the pursuit of reality could attain the level of the highest form of art. The painted portrait in America experienced the same disastrous result. An excessive naturalism had been encouraged by the appearance of the camera, which produced an image of total objectivity and accuracy, and unfortunately both patron and artist accepted this as the true form of art. The photographic naturalism of the painted portrait was not to be outdone by the modeled portrait, and American portraiture had to await the arrival of such men as Jerome Singer, John Elkin, and Jerode Balter to restore Art with a capital A upon the throne usurped by Naturalism with a capital N. To rise above the dull mediocrity it had achieved, naturalism had to be revitalized with elegance and heroism.

Kommentar [A71]: From UPCAT 2013 Set A item number 250 - 254

66. According to the author, after the French Revolution French portrait painting
(1) was returned to the common man.
(2) improved its idealism.
(3) decreased in quality.
(4) developed into a modern classicism.

Kommentar [A72]:

67. Each of the following is mentioned as affecting art in the 1870s EXCEPT
(1) photography. (2) religion. (3) objectivism. (4) naturalism.

Kommentar [A73]:

68. It seems to be that the thing the author dislikes most about the art following the French Revolution is its
(1) inability to make changes.
(2) use of naturalism.
(3) poor craftsmanship.
(4) lack of elegance.

Kommentar [A74]:

69. The author implies that he liked least the works of
(1) Green. (2) Singer. (3) Peters. (4) Bolati.

Kommentar [A75]:

70. The article's main purpose is to
(1) discuss the reasons for the changes in some of the art of the mid-1800s.
(2) show how war can destroy art.
(3) urge that art take a turn from naturalism.
(4) show how classical art and modern art are alike.

Kommentar [A76]:

PASSAGE 3:

The general principles of dynamics are rules which demonstrate a relationship between the motions of bodies and the forces which produce those motions. Based in large part on the work of the predecessors, Sir Isaac Newton deduced three laws of dynamics which he published in 1687 in his famous *Principia*.

Prior to Newton, Aristotle had established that the natural state of a body was a state of rest, and that unless a force acted upon it to maintain motion, a moving body would come to rest. Galileo had succeeded in correctly describing the behavior of falling objects and in recording that no force was required to maintain a body in motion. He noted that the effect of force was to change motion. Huygens recognized that a change in the direction of motion involved acceleration, just as did a change in speed, and further, that the action of a force was required. Kepler deduced the laws describing the motion of planets around the sun. It was primarily from Galileo and Kepler that Newton borrowed.

71. Which of the following scientists established that the natural state of a body was a state of rest?
(1) Galileo (2) Kepler (3) Aristotle (4) Newton

Kommentar [A77]:

72. Huygen stated that acceleration was required
(1) for either a change in direction or a change in speed.
(2) only for a change in speed.
(3) only for a change in direction.
(4) neither for a change in direction nor for a change in speed.

Kommentar [A78]:

73. The first scientist to correctly describe the behavior of falling objects was
(1) Aristotle. (2) Newton. (3) Kepler. (4) Galileo.

Kommentar [A79]:

74. According to this passage, Newton based his laws primarily upon the work of
(1) Galileo and Copernicus.
(2) Ptolemy and Copernicus.
(3) Huygens and Kepler.
(4) Galileo and Kepler.

Kommentar [A80]:

75. What was the main purpose of this passage?
(1) to demonstrate the development of Newton's laws
(2) to establish Newton as the authority in the field of physics
(3) to discredit Newton's laws of motion
(4) to describe the motion of planets around the sun

Kommentar [A81]:

PASSAGE 4:

The first reaction one has to the question of viable approaches to the control of chemical and biological weapons (CBW) is that there are no such approaches. And it is most difficult to dispense with this first reaction. The reasons are that the nations, including some of the smaller ones, are already downstream too far. The larger arsenals for CB warfare may be restricted to the major powers, but there is little doubt that an increasing capability is proliferating in some of the smaller and developing countries. What used to be largely a picture of research has turned to development, and development has turned to manufacturing and stockpiling. The subject is shrouded in secrecy and it is the secrecy which seems to provide a non-stop momentum to realize the full potential of these types of weapons. No one really knows what someone else may have ready for employment in a military situation. The large and expensive programs in the United States and the Soviet Union are attributed to each other's "large and expensive programs". Knowledge and capability required for detection and defense are tied to knowledge and capability for retaliation. The "no first use" policy of the United States and other major nations implies that this retaliation may be in kind, and this requires that weapons of the CB class be available.

A philosophy of mutual deterrence is developing in CB warfare comparable to that in the nuclear warfare. In fact, much of the literature on the subject repeats that the stalemate in the latter opens up the need for capability in the former. As an arms race, CBW does not present the spiraling costs of the ICBM-ABM systems, hence a movement to CB weapons (especially chemical) among some smaller nations. So far as the major powers are concerned, the elements in CBW which are common with the nuclear arms race include the now-accepted approach to that race. Thus in discussing control of CB warfare, an editorial in the British journal, *Nature*, concluded:

"The balance of terror between the great power blocs may not be to everybody's taste, but it is probably still the best way of avoiding war."

76. It can be inferred that the control of chemical and biological warfare
   (1) is less costly than controlling other systems of warfare.
   (2) may not be possible or necessarily desirable.
   (3) is in the hands of the United States and Russia.
   (4) should become a matter of prime importance.

77. Which of the following is not given as a cause for the continued development of CB weapons?
   (1) increase hostilities between the nations involved
   (2) the need to have CB weapons with which to retaliate
   (3) the need to be able to detect a CB attack
   (4) other weapons programs are more costly than the development of a CB system

78. The writer in the British journal might feel that the research and development of CB system should be
   (1) encouraged and expanded.
   (2) conducted only by the major powers.
   (3) immediately halted.
   (4) maintained as it is now.

79. The justification for the United States' participation in CB warfare programs is mainly due to the
   (1) need for undetectable weaponry.
   (2) still untapped knowledge in that field.
   (3) costliness of the nuclear programs.
   (4) Soviet Union's having such a program.

80. The main purpose of this article is to
   (1) show the difficulties involved in stopping CB warfare programs.
   (2) explain the cost of CB warfare.
   (3) discuss alternatives to CB warfare.
   (4) chronicle the history of CB warfare.
